AMERICAN RIFLEMAN

JULY 1983

99th Year of Publication

Volume 131, No. 7

A PUBLICATION OF THE NATIONAL RIFLE ASSOCIATION
Harlon B. Carter, Executive Vice President

The NRA, the foremost guardian of the traditional American right to "keep and bear arms," believes that every law-abiding citizen is entitled to the ownership and legal use of firearms, and that every reputable gun owner should be an NRA Member.

FEATURES

CAUTION: All technical data, especially for handloading, presented in NRA publications reflects the experiences of individuals using specific equipment and components under specific circumstances. Such information is intended solely as a guide and should be used with caution. NRA accepts no responsibility for results obtained using these data.

TO CHANGE YOUR ADDRESS or to report a damaged or undelivered magazine, write Director, Membership Division. Do not return damaged copies. Change of address should include both new address and a mailing label bearing the old one. In case of duplication send both labels.

RUGER® DOUBLE-ACTION REVOLVERS

The barrel, sighting rib, and ejector rod housing are a rugged, one piece forging of heat-treated stainless or chrome-molybdenum steel. The rear sight on Security-Six models is adjustable for windage and elevation.

Ruger double-action revolvers are designed for great strength, with extra metal where it counts—in the top strap and critical areas around the barrel threads.

The spring-loaded firing pin is enclosed in the frame. With the trigger released and the transfer-bar withdrawn below the firing pin, the hammer rests directly on the frame and cannot contact the firing pin.

The transfer-bar safety system provides that the hammer blow can be transmitted to the firing pin only when the trigger is pulled all the way to the rear. This is a positive internal safety feature.

Music wire or stainless steel coil springs are used throughout the Ruger double-action revolvers.

DISASSEMBLED VIEW

Ruger double-action revolvers have been expressly designed to handle the powerful .357 Magnum cartridge, and are also perfectly matched to the .38 Special and 9mm Parabellum cartridges. Where our competitors have had to enlarge their revolvers, our compact design handles Magnum loads without excessive weight. They have the structural strength to withstand the firing of many thousands of service rounds under the most rugged conditions, providing the user with an unprecedented degree of reliability and durability—proven repeatedly by test!

The Ruger double-action revolver breaks down into sub-assemblies in seconds without tools. The working parts are installed through the top and bottom of the solid side-wall frame. In this way we avoid the use of a removable side-plate which would weaken the frame. Furthermore, our frame is constructed with heat-treated chrome-molybdenum or stainless steel alloy with extra metal where it counts: in the top strap and critical areas around the barrel threads. Most of the small internal parts of Ruger double-action revolvers are made of stainless steel, even in standard blued models.

Ruger double-action revolvers are accurate, with smooth trigger pulls, and are handsomely finished to reflect the precision that is built into them in every way. See the Ruger double-action revolvers at your Ruger Dealer or write to us for a free color catalog of the entire line of fine Ruger sporting firearms.
