

JOSHUA
BELL
VOICE
of the
VIOLIN

Joshua Bell brings a fresh "voice" to 15 of the most unforgettable melodies from opera and classical song. The selections on this all new recording include such favorites as Schubert's "Ave Maria," Rachmaninoff's "Vocalise" and Tchaikovsky's "None But the Lonely Heart," as well as beloved arias by Mozart, Bizet, Dvořák, Massenet & others. Opera's hottest new star, Anna Netrebko joins Bell in a performance of the soulful Strauss song "Morgen!"

Americans spend over one million dollars
on energy every minute.

So who has the power to change that?

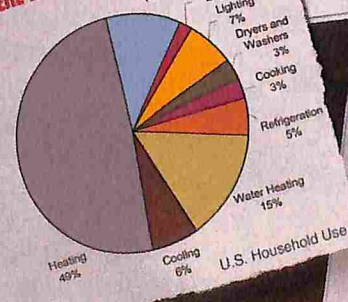

Because of surging economies in the developing world and continued growth among the industrialized nations, global energy use is climbing. As a result, supplies are tight. Prices are rising. And energy users are calling for viable alternatives.

The good news is we've got a huge source of alternative energy all around us. It's called conservation, and it's the lowest cost new source of energy we have at hand. A reduction of just 5% of global energy use would save us the equivalent of over 10 million barrels of oil a day. Clearly, saving energy is like finding it. So how do we do it?

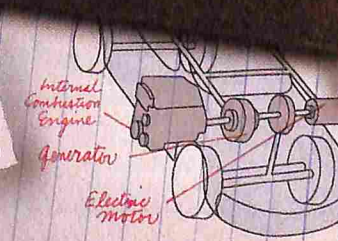

Incorporating energy efficient technology into new construction could reduce consumption by 40%. Governments and businesses must reduce their own energy use and promote conservation to their citizens and employees. Further improvements in fuel efficiency will play a crucial role, too. And the average person wields incredible power when it comes to conserving energy, from driving slower to switching to more efficient home appliances.

Of course, not only does using less energy mean there's more fuel to go around, it also means fewer greenhouse gas emissions. The fact is, if everyone began conserving today, we'd see results immediately. We've taken some of the steps needed to get started but we need your help to get the rest of the way.

WHERE DOES YOUR ENERGY GO?

willyoujoinus.com

Conservation Facts:

If everyone reduced their driving speed from 65 to 55 mph, we'd save three million gallons of gas a day.

Replacing one incandescent lightbulb with a compact fluorescent lamp would save 500 pounds of coal and over a 1/2 ton of CO₂ emissions.

If just one in 10 homes used ENERGY STAR®-qualified appliances, the environmental benefit would be like planting 1.7 million new acres of trees.

Chevron Steps Taken:

Saving our own energy:
- Since 1992, Chevron has improved energy efficiency by 24%
- We use cogeneration technology at our refineries to produce additional electricity from otherwise wasted energy

Saving other people's energy:
Chevron Energy Solutions is a separate, proven business dedicated to energy efficiency. Success stories include:
- Improvements that will lower the Northern CA postal service's electricity spending by 46%
- Helping the U.S. government save taxpayers \$151 million while reducing greenhouse gas emissions by an expected 1.5 million tons
