ARTICLES

LINEAR PROGRAMMING by William W. Cooper and Abraham Charnes

The interlocking variables that enter into a management decision can be considered simultaneously, and the infinity of possible solutions within the given limitations can thereby be reduced to the best one. 21

ARTIFICIAL INTERNAL ORGANS by Peter F. Salisbury

The blood of a human patient can now be rerouted through machines that reproduce several of the simpler functions of the internal organs. Artificial kidneys and heart-lung machines are ready for clinical use. 24

THE HISTORY OF A PERUVIAN VALLEY by James A. Ford

Apartment houses and a slave-labor camp are but two of the indices from which a group of investigators have reconstructed the cultures of the various settlements that followed one another in a single valley. 28

THE ORIGIN OF LIFE by George Wald

Since processes catalyzed by enzymes can also occur without them, organic groupings may have formed spontaneously in the primordial oceanic broth. A lack of oxygen would have shielded them from decay. 44

A TOPOGRAPHIC MICROSCOPE by Samuel Tolansky

A third dimension can be added to surfaces seen through a microscope if a straight line is placed across a pencil of light coming from the side. The profile of the object can then be deduced from the line's shadow. 54

TSUNAMIS by Joseph Bernstein

These gigantic ocean waves have produced vast catastrophes on shores along their paths. Though the earthquakes that cause them cannot be predicted, the tsunamis' toll can be forestalled by early warning. 60

SHREWS by Oliver P. Pearson

These creatures consume energy at a faster rate than any other mammal. They have a remarkable propensity for eluding the best traps a collector can set and, once caught, astonish their captors by their voracity. 66

THE BOUNDARY LAYER by Joseph J. Cornish III

The performance of an airplane is closely affected by the flow of air in a layer that is about an inch thick. If the growth of this layer is controlled, the lifting power of the wings can be substantially increased. 72

DEPARTMENTS

LETTERS	2
50 AND 100 YEARS AGO	8
THE AUTHORS	12
SCIENCE AND THE CITIZEN	36
BOOKS	78
THE AMATEUR SCIENTIST	84
BIBLIOGRAPHY	92

Board of Editors: GERARD PIEL (*Publisher*), DENNIS FLANAGAN (*Editor*), LEON SVIRSKY (*Managing Editor*),
ROBERT EMMETT GINNA, ALBERT G. INGALLS, JEAN LE CORBEILLER, LAWRENCE P. LESSING,
JAMES R. NEWMAN, E. P. ROSENBAUM
Art Director: JAMES GRUNBAUM
General Manager: DONALD H. MILLER, JR.
