page 56: bowhunting in Arizona for a once-in-a-lifetime elk

# Browning introduces the Compound Hunter. What makes it different is what makes it better.

The difference between the new Browning Compound Hunter and other compounds starts right at the handle riser. The Hunter is pre-drilled to accept the Browning Super Berger Button and other cushion plungers, Browning bow sights, and bow quivers the day you unpack it. And it's fitted with three accessory insert bushings that accommodate hunting and target stabilizers, other popular quivers, and bow fishing reels. The lightweight, precision cast magnesium handle riser is finished in non-glare, no slip, baked-on vinyl, so it needs no camouflaging. And it has an over-draw cutout, so you can shoot shorter and lighter hunting arrows than with any other compound.

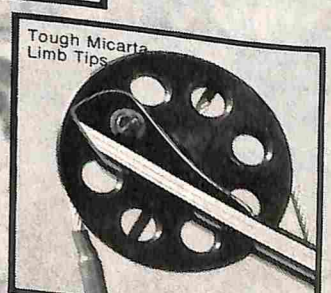

The limb side plates are streamlined, so they won't hang up when you're busting your way through thick brush. The eccentric wheel axles are mounted in tough, long-lasting Micarta limb tips for extra durability. The axles and click adjusting ratchet gears are heat-treated stainless steel, to assure long life and trouble free operation. The Compound Hunter shoots your arrows with more speed and power than a regular recurve bow. It lets you shoot lighter arrows at greatly increased speed. Its system of pulleys and cables gives you a mechanical advantage. As you approach full draw, draw force is reduced by as much as 25%. A 50 lb. bow draws like a much longer at full draw. So you have more time to aim. And you can wait for that big buck to step out from behind that tree or rock.

Nock a new Browning Compound Hunter at your Browning Dealer's today. What makes it different will make you a better hunter.

Browning Compound Hunter \$224.95\*, shown with Browning quick attach/quick detach compound bow quiver (code 19346). \*Suggested retail price
