ARTICLES

THE CENSUS

by Philip M. Hauser

A report on the 1950 inventory of U. S. human resources. The median age and the concentration of population in metropolitan areas increased; the size of the family and the relative number of men decreased. 15

PARADOXES OF THE MISSISSIPPI

by Gerard H. Matthes

It is generally thought that the great river is muddy, that its bed is rising above the level of the surrounding country, that its delta is growing outward into the Gulf of Mexico; but none of these assumptions is true. 18

THE SUTTON HOO SHIP-BURIAL

by R. L. S. Bruce-Mitford

Shortly before World War II the tomb of a seventh-century Anglo-Saxon king was found on an English estate. Its treasure of "grave-goods" has yielded new information about the origins of the English people. 24

REACTORS

by Lawrence R. Hafstad

The machines required for the controlled release of nuclear energy are complicated and controversial. A report on declassified reactors and on the present reactor program of the Atomic Energy Commission. 43

SHAKESPEARE THE PHYSICIST

by Banesh Hoffmann

A study by Sherlock Holmes reveals that the Bard anticipated radio, relativity and the atomic bomb. He also foresaw atomic catastrophe, but perhaps we should not take Holmes' interpretation too seriously. 52

CATAclysmic EVOLUTION

by G. Ledyard Stebbins, Jr.

Many plants, including some of the most important cultivated species, evolved suddenly by a process involving the doubling of chromosomes. The same process can be induced artificially to produce new species. 54

THE IMITATIVE DRUGS

by Richard O. Roblin, Jr.

The sulfa drugs are actually counterfeit vitamins. The discovery that molecules of similar structure compete with one another in biochemical reactions provides a tool for studying metabolism and drug action. 60

THE SQUID

by H. B. Steinbach

The 10-tentacled, jet-propelled cephalopod has been known to reach a length of more than 50 feet. The animal is of great interest to biologists, because even the smaller varieties provide giant nerve fibers for study. 64

DEPARTMENTS

LETTERS	2
