ARTICLES

OPERATIONS RESEARCH by Horace Levinson and Arthur Brown

A powerful tool developed during World War II to solve problems of military tactics and strategy is now being applied in business and government. It has already proved helpful in some surprising cases. 15

THE CONTROL OF BLOOD CLOTS by Shepard Shapiro

A report on the spectacular effectiveness of the recently developed anticoagulants, the first successful treatment for the deadly thrombotic diseases. A simple new test now makes the treatment safe for general use. 18

THE STRUCTURE OF THE NUCLEUS by Maria G. Mayer

Physicists are keenly discussing a new theory that has made a promising start toward cracking the mystery of the make-up and behavior of the atomic nucleus. The theory is explained by one of its authors. 22

CHROMATOGRAPHY by William H. Stein and Stanford Moore

Forty-five years ago a Russian botanist made a discovery which has influenced "the life of man and beast the world over." His method for separating substances has become an invaluable tool of science. 35

THE HORN OF THE UNICORN by John Tyler Bonner

There never was any such animal, but the horn itself was not legendary. Early biologists found that it came from a peculiar arctic species of whale. The nature of the horn still presents an interesting problem. 42

FERTILIZATION IN MAMMALS by Gregory Pincus

A quarter-century of research in how mammals' eggs may be fertilized, both in nature and by artificial means, has begun to bear useful fruits in animal breeding and in solving problems of human sterility. 44

COLOR BLINDNESS by Alphonse Chapanis

It is a more serious disability than most people realize. Affecting one of every eight men, it has influenced history and in modern life is responsible for numberless accidents. An account of its causes and effects. 48

WARM CLOTHES by M. E. Barker

On the basis of objective, scientific experiments, an expert in the field here presents specifications, some of them a considerable departure from conventional ideas, for effective clothing in various climates. 56

DEPARTMENTS

LETTERS	2
