

Save **95 miles** of
"KITCHEN-HIKING"
 every year

Do you know that in an old-style kitchen you walk about 125 miles a year? Studies show you do. A modern all-steel kitchen cuts this down to about 30 miles — or 95 miles less every year.

Here's how: The three places where you work most are at the sink, range and refrigerator. Convenient steel cabinets at these work-centers save endless steps back and forth.

Steel cabinets give you more space too. Drawers slide open at a touch, will not warp or rot. Doors open and close easily and are quiet. Steel cabinets are vermin-proof, dust-proof and easy to keep clean and sanitary.

When the manufacturer has used ARMCO prime quality Steel, you have every assurance of basic value. Ask about this. ARMCO Steel is strong without being bulky — specially made to take a handsome finish of glossy, serviceable baked enamel.

Whether you are building or remodeling, you can make your kitchen an attractive and efficient "workshop" with steel cabinets. They are easily and accurately installed and their cost is surprisingly low. Write for complete information. The American Rolling Mill Company, 821 Curtis Street, Middletown, Ohio.
