LIFE'S PICTURES

The paintings of the artist-inventor, Samuel F. B. Morse, reproduced on pages 59-62, were photographed by Fernand Bourges of New York. A pioneer in color photography, Mr. Bourges has taken pictures of more than 2,000 paintings, including many of the world's great masterpieces, in the last 30 years. He owns 10 cameras, some of which he designed and built himself. His biggest job was photographing a painting called *Pantheon de la Guerre* which was 42 feet high and 402 feet long.

The following list, page by page, shows the source from which each picture in this issue was gathered. Where a single page is indebted to several sources, credit is recorded picture by picture (left to right, top to bottom) and line by line (lines separated by dashes) unless otherwise specified.

HARD WORK AHEAD for these young eyes

They'll have to learn tasks Nature never intended them to do... reading and writing and other close seeing work. Nature meant human eyes for far

seeing, under the natural light of day—but these eyes will have to work indoors, under artificial light! That makes it important that all indoor seeing tasks are done under *enough* light... lots and lots of well-diffused, shadowless light... but without harmful glare. That's easy—especially when you can fill every light socket with bright, long-lasting Westinghouse bulbs... especially when sizes up to 100 watts are only 10¢ plus tax! Don't take chances with a child's eyes. For better See-ability, better buy Westinghouse bulbs. Westinghouse Electric & Manufacturing Company, Bloomfield, N. J.
