ARTICLES

- THE ORIGINS OF U. S. SCIENTISTS** by H. B. Goodrich *et al*
What is the educational background of doctors of natural science? An unusual study reveals the surprising fact that small liberal arts colleges produce more of them per thousand graduates than large universities do. **15**
- ARTIFICIAL RESPIRATION** by Stefan Jellinek
A person apparently dead of electric shock or drowning may actually be still alive. A study of the phenomenon indicates that a little-known method of resuscitation may be superior to the one commonly used. **18**
- COMETS** by Fred L. Whipple
From the earliest times man has sought an explanation of these diffuse visitors to the center of the solar system. Recently astronomers have developed some fruitful hypotheses about their composition and their origin. **22**
- SYNTHETIC FIBERS** by Simon Williams
The new man-made fibers developed during recent years are revolutionizing not only the textile industry but large sections of the world's economy. A description of the properties and qualities of the new fabrics. **37**
- THE PEOPLES OF PINE LAWN VALLEY** by Paul S. Martin
For eight summers archaeologists have labored to unravel the cultural history of the Indians who lived quietly in New Mexico while Greece and Rome rose and fell and the civilization of northern Europe developed. **46**
- THE THEORY OF NUMBERS** by Paul S. Herwitz
In studying the fascinating properties of integers mathematicians have reflected upon such diverse matters as sailors and coconuts, the peculiar habit of Pierre de Fermat, calculating machines and magic squares. **52**
- ATOMIC MICROSCOPE**
A new technique devised at the Massachusetts Institute of Technology makes it theoretically possible to view or photograph the atoms in any crystal. The method utilizes the diffraction both of X-rays and light. **56**
- THE BLOOD RELATIONSHIPS OF ANIMALS** by Alan A. Boyden
Because the proteins of a species are as characteristic as its bones, the reactions among the serum proteins of different animal species provide the basis of a means to fit them into the evolutionary scheme of things. **59**

DEPARTMENTS

- LETTERS **2**
50 AND 100 YEARS AGO **6**
SCIENCE AND THE CITIZEN **28**
BOOKS **64**
THE AMATEUR ASTRONOMER **68**
